National Remote Sensing Centre

Indian Space Research Organisation
ISO 9001:2015

Introduction

National Highway Authority of India was set up by an act of the Parliament, NHA Act, 1988. "An Act to provide for the constitution of an Authority for the development, maintenance and management of national highways and for matter connected therewith or incidental thereto".

NHA's mission

Development, maintenance and management of National Highways

Manage toll fee collection and regulate traffic on NHs for its proper management

Advise the Central Government on matters relating to highways

Assist State Government in the formulation and implementation of schemes for NH development

NHAI's role in Greening of Highways

NHAI's mandate also covers objectives of the **Green Highways Policy-2015** by way of:

- Plantation,
- Transplantation,
- Beautification and
- Maintenance activities

to develop green aesthetic corridors along the National Highways by planting ornamental and flowering trees and shrubs on median and along roadside.

Photographs showing Hon'ble Minister RT&H with officials during plantation drives, personnel visiting site, plantation workers on site and transplantation activities ongoing on site.

Typical Highway Cross-section

60 m (ROW: Right of Way)

TYPICAL CROSS SECTION FOR NEW 4 LANE ALIGNMENT IN RURAL AREA

NHAI's efforts and its Monitoring

- Since 2015, ~4 **Crore plants** have been planted with **52.5 lakh** in this year alone.
- **35000+ km** of National Highways are being maintained and monitored for greening.
- One-time inventory of **2.40 Crore** geo-tagged plants using mobile-based technology.

Current Scenario

- Monitoring is dependent on Field personnel on site to record and digitize status at a fixed interval.
- Digitized reports available through NHAI's Data Lake software
- ✗ Mostly manual paper-based method
- ✗ Labour-intensive
- ✗ Cost ineffective
- ✗ Limited insights
- ✗ Limited scope for Y-on-Y comparison

What is needed

A decision support system that captures the overall status of green cover, allows spatio-temporal analysis, helps identify NH stretches that are devoid of adequate cover and provides insights for better plantation management.

What is GCI?

- Green Cover Index is a “macro-level metric” derived from satellite data that captures the health and density of plantations through their chlorophyll content based on Normalized Difference Vegetation Index (NDVI).
- First-ever estimation of green cover on NHs for monitoring trends and variations annually.
- A pan-India estimation of the presence or absence of green cover at an interval of every 1 km of NH.

Green Cover Index

Benefits

First Pan-India estimation of Green Cover along National Highways

Monitoring of plantations on Year-on-Year basis during projects' lifecycle

Aid in decision support for better management of activities pertaining to greening of NHs

Cost effective G2G approach with assurance of rolling out annual metrics

Effective contribution towards India's international commitments like NDCs, SDGs, CoP

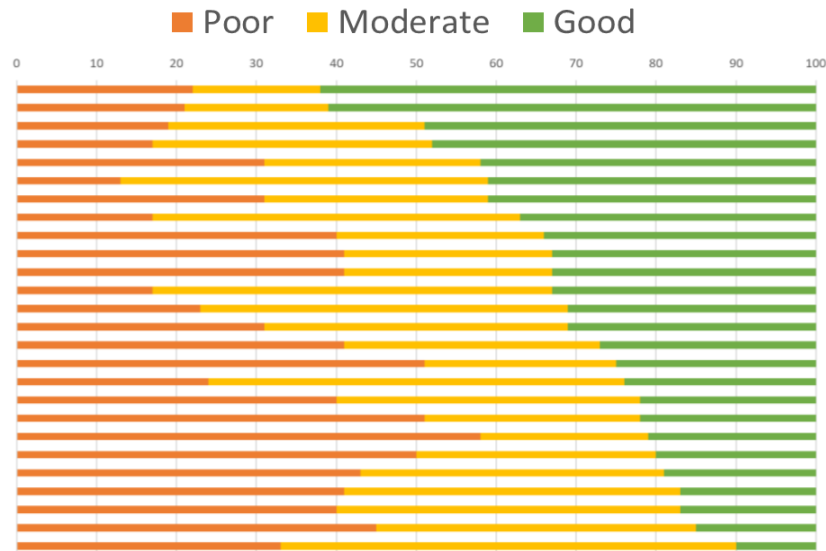

*NDCs - Nationally Determined Contributions
SDGs - Sustainable Development Goals
CoP - Conference of the Parties*

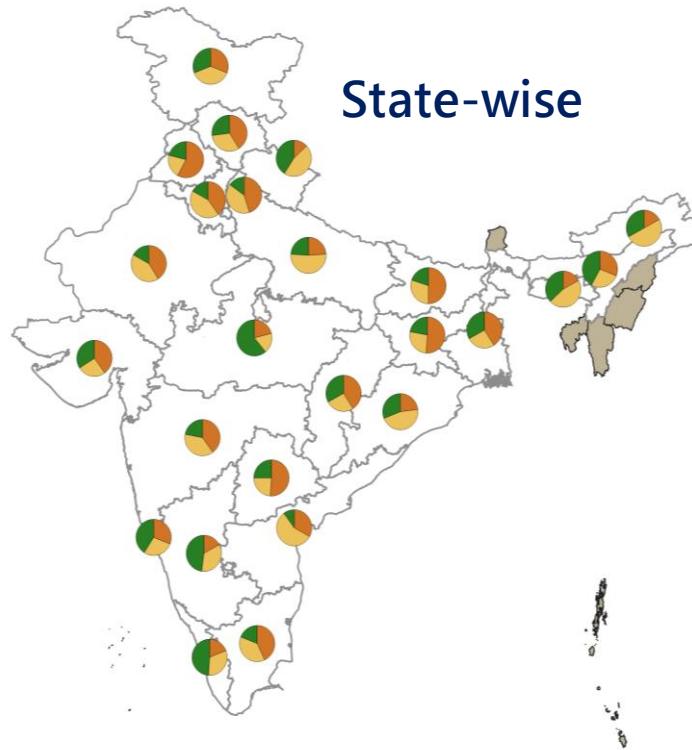

Rationale

Based on the condition of green cover maintained along NHs, a disaggregated index can be built that would help in categorization and ranking:

- State-wise
- NH-wise
- RO-wise
- Project / Package-wise etc.

Data for illustrative purpose only

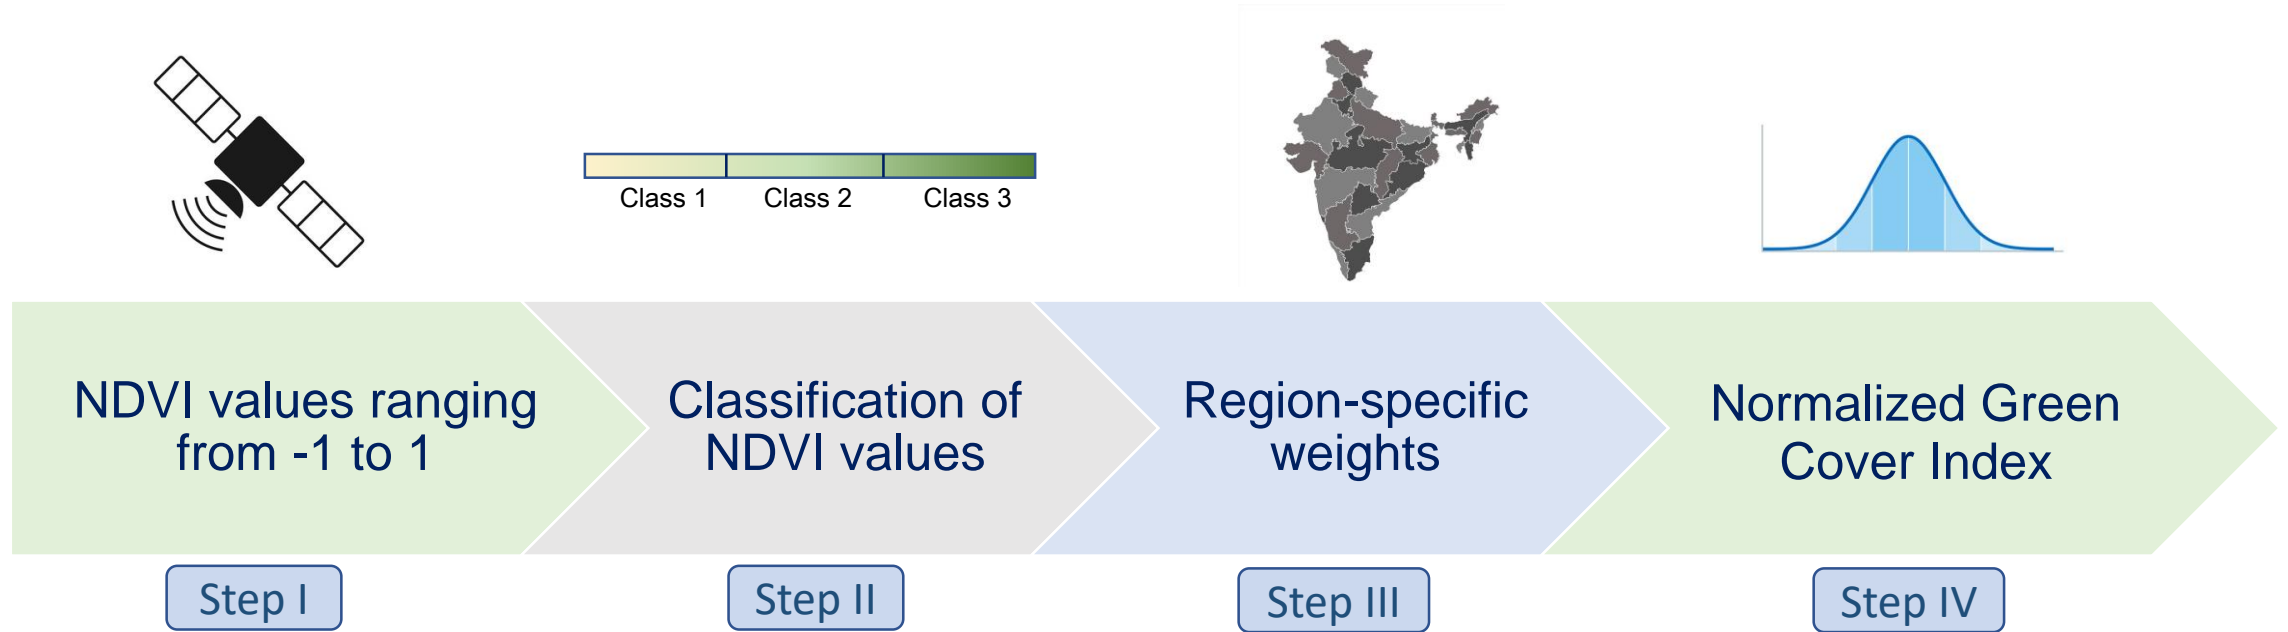

Map for illustrative purpose only

Map for illustrative purpose only

Methodology

Final Deliverable: % value of Green Cover w.r.t. the area available for plantation would be calculated at a granularity of 1km for all NHs that may further be categorized into:

- Say,
- 0 – 50% - **Poor Green Cover**
 - 50 – 80% - **Moderate Green Cover**
 - 80 – 100% - **Dense Green Cover**

Pilot Study Results

Pali-Pindwara stretch (NH 14)

RO-Jaipur | PIU-Jodhpur | Site Visit: 16 May 2023

Amritsar-Pathankot stretch (NH 54)

RO-Chandigarh (PB) | PIU-Amritsar | Site Visit: 06 Jun 2023

Chandikhole-Paradip stretch (NH 53)

RO-Bhubaneswar | PIU-Chandikhole | Site Visit: 08 Nov 2023

Pali-Pindwara stretch (NH 14)

Package length = 131 km

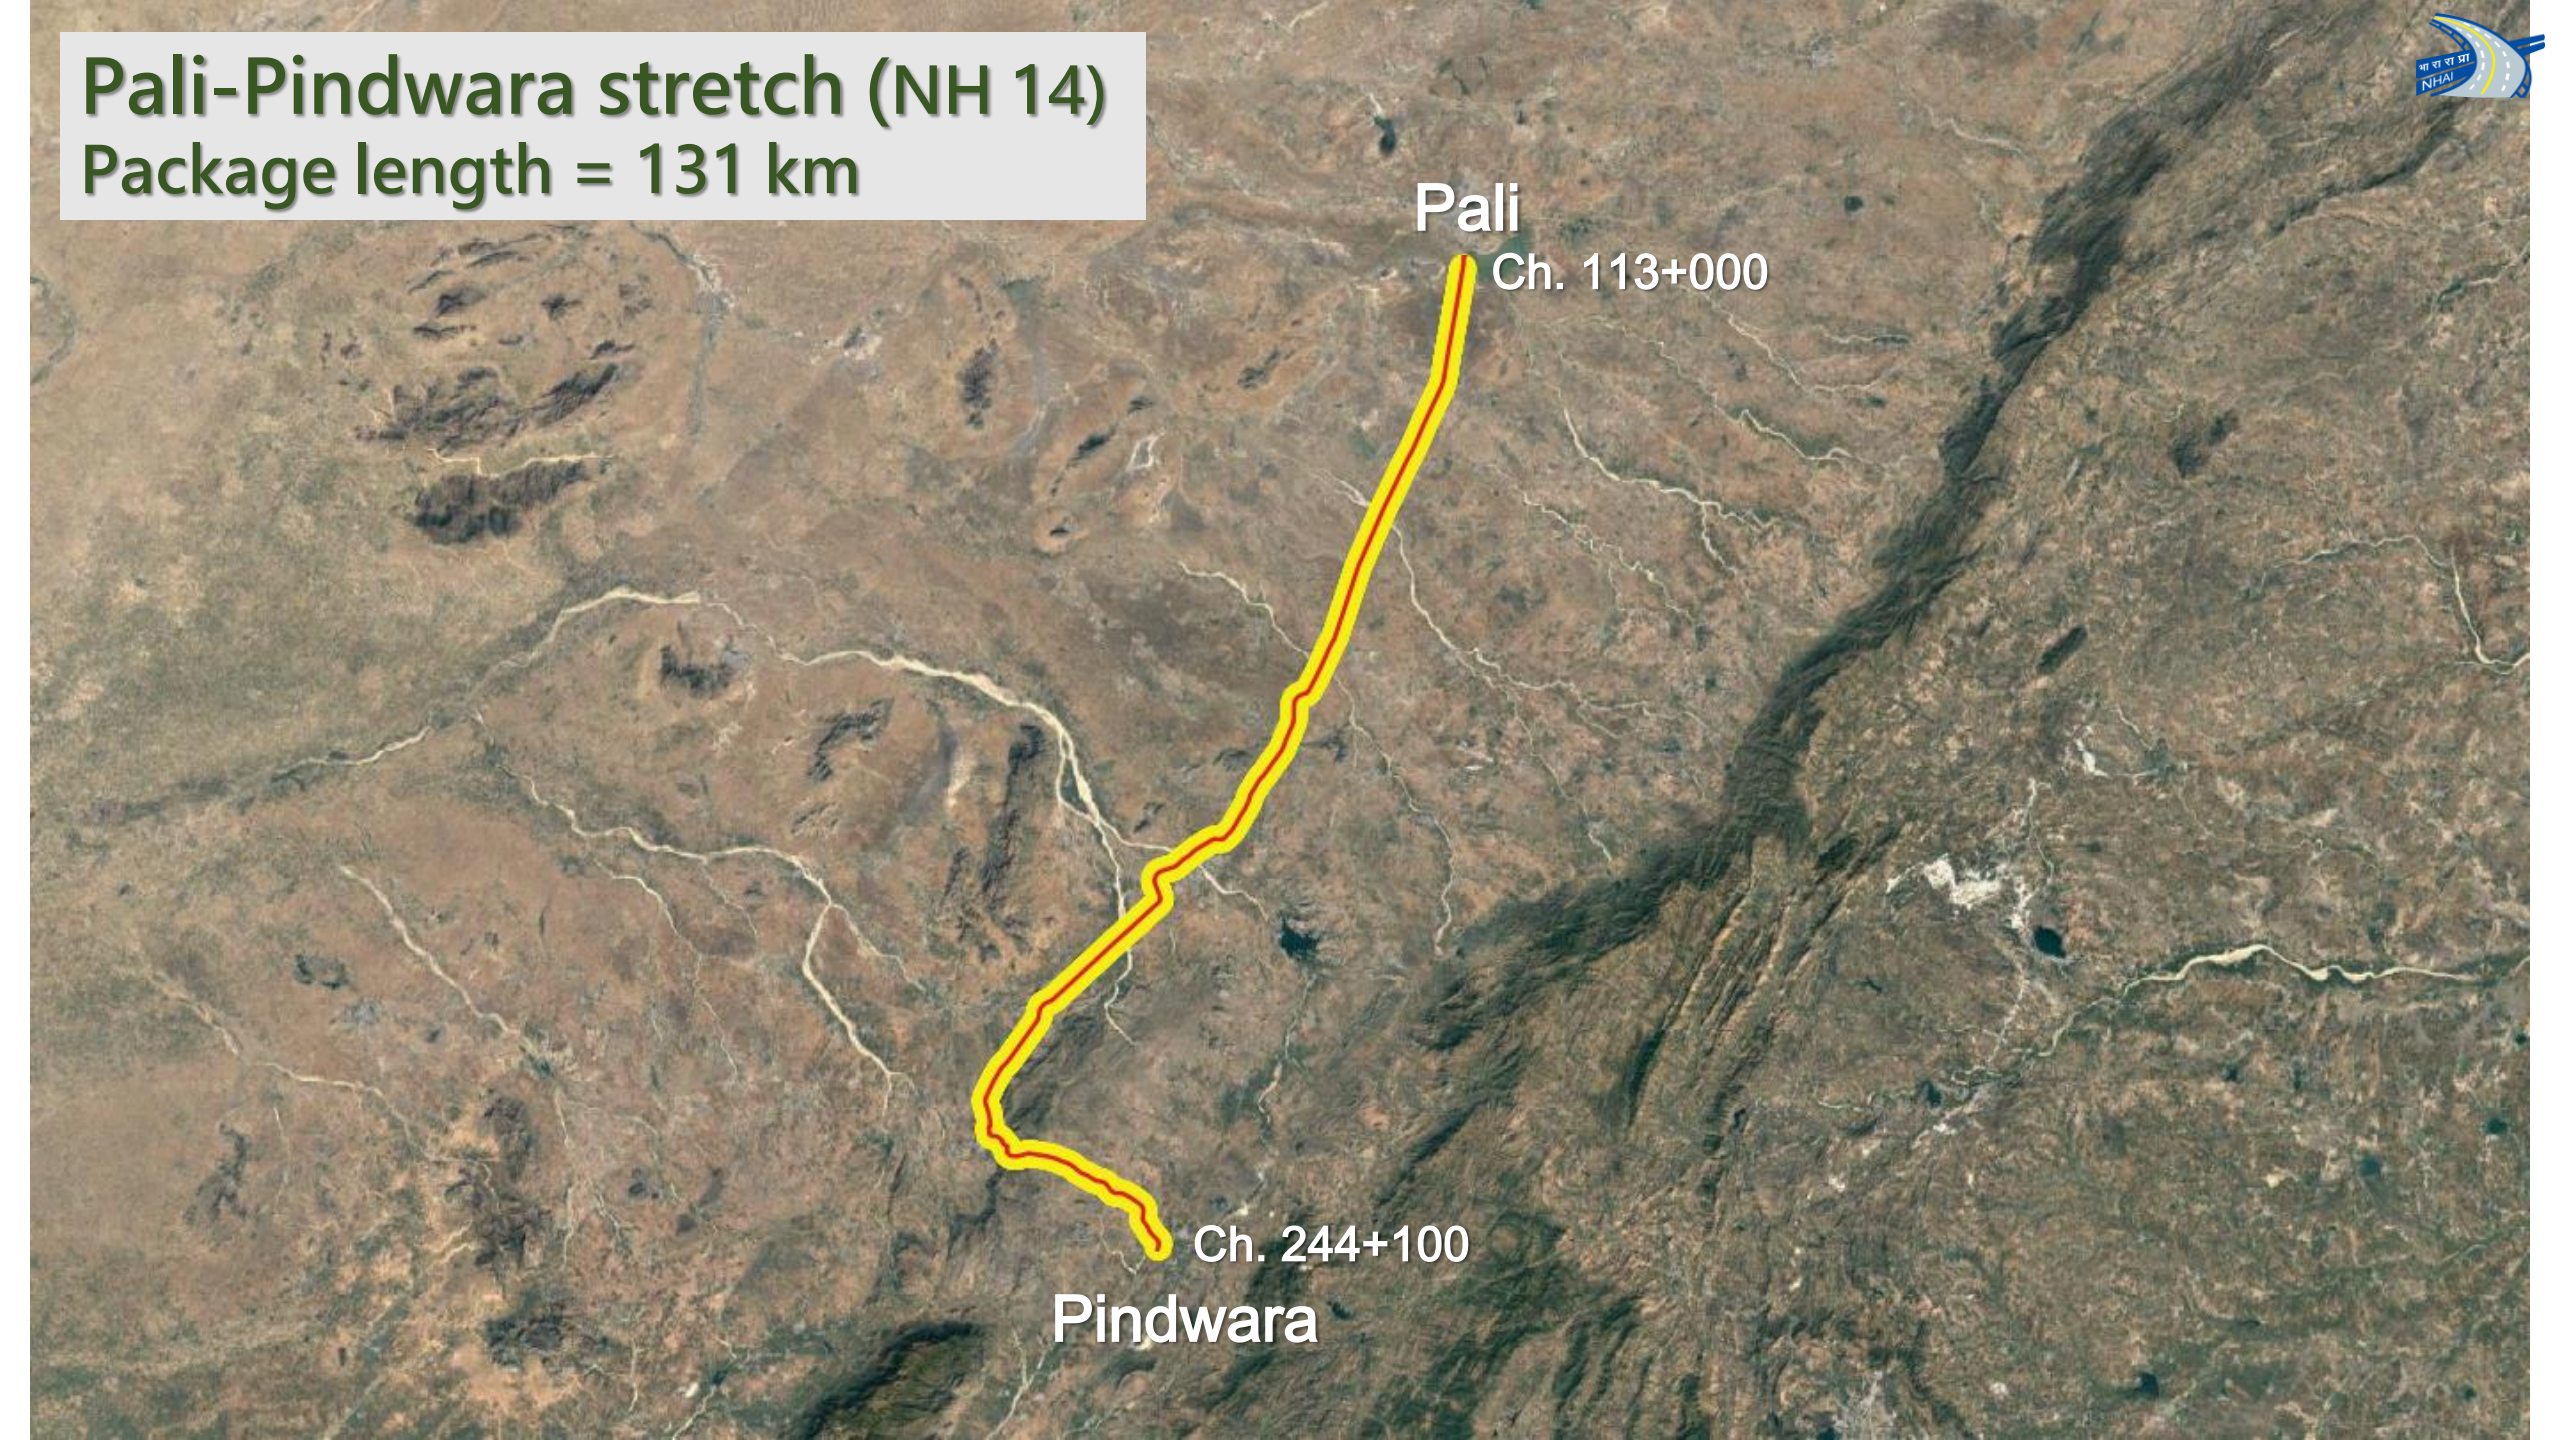

Pali

Ch. 113+000

Ch. 244+100

Pindwara

Chainage :
170+300 to 170+400

Findings:
Green Cover Index /
NDVI values
corresponds with LHS
plantations observed
within the ROW

Amritsar-Pathankot stretch (NH 54)

Package Length = 101 km

Pathankot

Ch. 108+502

Amritsar

Ch. 6+082

Chainage :
68+700 to 68+500

Observation:
Accurate identification of very high patch of NDVI and very low patch of NDVI due to recently constructed petrol pump

Chainage :
76+200 to 76+000

Observation:
The reason for low NDVI values along the NH could be attributable to the on-going widening activities.

widening

widening

Chandikhole-Paradip stretch (NH 53)

Package Length = 76 km

Chandikhol
Ch. 0+000

Ch. 76+588
Paradip

Chainage :
03+800 to 03+900

Observation:
Good correlation with
ground condition

Chainage :
13+800 to 14+100

Observation:
Good correlation with
ground condition

MEDIAN

6.7

6.8

6.9

7

Chainage :
06+700 to 06+800

Observation:
Large trees in median
were captured well in
the data

Green Cover Statistics for every 1 km

Green Cover Index = 69.5% for 46 km of Chandikhole-Paradip

Challenges vs Benefits

- Typical ROW of 45 to 60 m leave only a **few meters available** for plantations;
- With a **spatial resolution of ~5 m** of LISS IV MX data, a very narrow segment of the imagery can be used for analysis;
- **Commission/omission** errors would be unavoidable;
- **Errors in vectors** of the highway design could lead to miscalculations;
- Exact **geometric matching** of scenes from one pass to the next would be a must for temporal analysis of the same location.
- **Fastest and most cost effective** method of deriving macro-level green cover estimates;
- **High granularity of 1 km** would allow NHAI to fine tune its interventions and take focused measures to improve green cover;
- **Year-on-Year growth / temporal analysis** of National Highways green cover;
- Other than count, GCI would present a first ever **quantification of efforts** made by NHAI;
- Would serve as a basis to support **ranking** and promote **healthy competition** amongst NHAI's Field Offices to maintain their stretches better.

MoU between NHAI and NRSC

MoU signed between NHAI and NRSC on 03 Jan 2024 to develop the Green Cover Index for National Highways of India in the gracious presence of Hon'ble Union Minister

NHAI and NRSC Teams Meeting at NRSC, Shadnagar to discuss roadmap and way forward

Thank you
